Chimney Caps.

WINTER'S SPECIFICATION.

TO ALL TO WHOM THESE PRESENTS SHALL COME, I, JOHN WINTER, of Acton, in the County of Middlesex, Esquire, send greeting.

WHEREAS His most Excellent Majesty King George the Fourth did, by His Letters Patent under the Great Seal of that part of the United Kingdom
5 of Great Britain and Ireland called England, bearing date at Westminster, the Seventh day of November, in the first year of His reign, give and grant unto me, the said John Winter, my eñors, adñors, and assigns, His especial licence, full power, sole privilege and authority, that I, the said John Winter, my eñors, adñors, and assigns, during the term of years therein mentioned,
10 should and lawfully might make, use, exercise, and vend, within England, Wales, and the Town of Berwick upon Tweed, my Invention of "CERTAIN IMPROVEMENTS ON CHIMNEY CAPS, AND IN THE APPLICATION THEREOF;" in which said Letters Patent there is contained a proviso that if I, the said John Winter, shall not particularly describe and ascertain the nature of my said
15 Invention, and in what manner the same is to be performed, by an instrument in writing under my hand and seal, and cause the same to be inrolled in His Majesty's High Court of Chancery within two calendar months next and immediately after the date of the said Letters Patent, that then the said Letters Patent, and all liberties and advantages whatsoever thereby granted,
20 shall utterly cease, determine, and become void, as in and by the same, relation being thereunto had, will more fully and at large appear.

Winter's Improvements in Chimney Caps.

NOW KNOW YE, that in compliance with the said proviso, I, the said John Winter, do hereby declare that the nature of my said Invention, and the manner in which the same is to be performed, are particularly described and ascertained in the following description thereof (that is to say):—

The cap to be constructed of iron, copper, tin, wood, earthenware, or any other suitable substance or material. The form thereof I prefer to be conical, to be placed on a pivot over the centre of the opening of the chimney, and to be supported by one or more small bars of iron or other suitable material, forming a triangle, as preferable to any other form; such support to be affixed to the opening of the chimney, or to the chimney pot or funnel, so as to allow the cap to yield to the action of the wind. The base of the cap, when so placed, to reach below the aperture of the chimney, or chimney pot or funnel, and to be of sufficient size in the circumference to allow the smoke to escape freely. The size of the cap to be encreased or diminished according to the size of the chimney or chimney pot or funnel.

In witness whereof, I, the said John Winter (party hereto), have hereunto set my hand and seal, this Fourteenth day of December, in the year of our Lord One thousand eight hundred and twenty.

JOHN (L.S.) WINTER.

AND BE IT REMEMBERED, that on the Fourteenth day of December, in the year of our Lord 1820, the aforesaid John Winter came before our said Lord the King in His Chancery, and acknowledged the Specification aforesaid, and all and every thing therein contained and specified, in form above written. And also the Specification aforesaid was stamped according to the tenor of the Statute made for that purpose.

Inrolled the Fifth day of January, in the year of our Lord One thousand eight hundred and twenty-one.
